2012 California List of Reportable Conditions for Animals and Animal Products

Pursuant to the California Food and Agricultural Code Section 9101, the California Department of Food and Agriculture (CDFA), Animal Health Branch annually reviews, updates and republishes the List of Reportable Conditions for Animals and Animal Products. The law requires that all licensed veterinarians, persons operating diagnostic laboratories and anyone who should recognize that an animal or animal product might be affected by such a condition, must report that information to the CDFA or the United States Department of Agriculture. What must one report?

Any animal disease not known to exist in the United States, any disease for which a control program exists, or any unexplained increase in the number of diseased animals or deaths must be reported. Any conditions caused by exposure to pesticides, toxins, heavy metals or other toxicants that have or may have the potential to be a public health, animal health or food safety threat must be reported within 24 hours. California veterinarians are vital partners for field observations and prompt reporting of potential diseases and pests in livestock and poultry in the state. Prompt reporting contributes significantly to early diagnostics, response and control.

California is a voluntary participant in the National Animal Health Reporting System (NAHRS), a key component of the National Animal Health Surveillance System and the only comprehensive reporting system for the World Organization for Animal Health (OIE)-reportable diseases in the United States (U.S.). Under NAHRS, state animal health officials submit monthly reports on the occurrence of confirmed OIE-reportable diseases in poultry, livestock and aquaculture species. The California List of Reportable Conditions for Animals and Animal Products concurs with NAHRS-reportable disease conditions. The United States provides this summary-level information on animal health status to our trading partners, which helps protect the U.S. share of the global market for animals and animal products.
